

# Grape Networks Invades Europe

## Establishes Offices in France & Germany

SAN RAMON, Calif.--(BUSINESS WIRE) July 23, 2007-Grape Networks, the World Leader in the Wireless Sensor Monitoring of Vineyard Microclimates and Sensor Canopy Management on the Internet, today announced that the Company has established sales offices in Germany and France. The two new offices will be responsible to service vineyards in Europe, the Mediterranean, the former Russian Republics and South Africa. Mr. Francis Tchertoff, headquartered in France, email, [francis@grapenetworks.com](mailto:francis@grapenetworks.com), has been appointed the Managing Director for Southern Europe, and Mr. Karlheinz Kuebert, email, [karlh@grapenetworks.com](mailto:karlh@grapenetworks.com), headquartered Germany, has been appointed the Managing Director for Central Europe

Since Grape Networks' inception four years ago, the Company has been dominating the vineyard marketplace for the Wireless Sensor Monitoring of Microclimates, on the Internet, in the United States, but the US only represents 5% of the of the 20 Million World Wide vineyard acres. Furthermore, according to Peter Tsepeleff, President of Grape Networks, "...the Company has had a tremendous response in vineyards in the US, and now that we have a proven system, it is time to expand into the huge international arena."

Grape Networks monitors' vineyards, with miniature wireless sensors, embedded directly next to the Grape Berry. The sensors operate on just two double AA batteries, and transmit data in a wireless mesh to a gateway, where the data is sent to the Internet for reception anywhere in the World. Along with Temperature, Humidity and Solar Radiation, alerts for frost and powdery mildew, are sent to any Internet enabled PC or Mobile phone.

### About Grape Networks, Inc.

Grape Networks has developed the Climate Genie which utilizes the Internet, (DBMS), intelligent machines, low power radios and very small size sensors (MEMS). Grape Networks is the pioneer in the design, application, development and production of Wireless Sensor Area Networks for Vineyards and Fields. The company has partnerships with a number of the worlds' foremost authorities on wireless mesh sensor networks, platforms, applications, viticulture and MEMS Sensors.
